

Morgan Parker

The
Lifetimer 

5 years ago, you started as a researcher and lecturer at Comenius University in the field of nanotechnology. You teach classes in nanosensing, quantum computing and calculus and lead one research project on increasing the sensitivity of nanosensors for healthcare applications. Because of your experience, you have followed the launch of The Lifetimer with high interest.

In your free time you like to go running and cycling. A healthy lifestyle is important to you, and you have been one of the first to try out The Lifetimer. You are an enthusiastic speaker and like to engage with students and stimulate lively discussions.

You have been asked to give a lecture during the introduction week to all students from the faculty about the impact of healthcare innovations. You have chosen the case of The Lifetimer as this is an interesting case and a timely example. You are very excited about this case and think that this technology may revolutionize the healthcare sector and brings new opportunities for nanotechnology in general.

The
Lifetimer 

You have been the university supervisor of Alex during the whole graduation process and arranged the internship at Eternallink Technologies. Your contact there, Peter de Graaf, is a collaborator in your current research project, and agreed to supervise Alex at the company.

Alex is a student within your faculty and has been one of the best students in your courses, very smart, interested and ambitious. In fact, you are not surprised that Alex did such a good job during the graduation project. You are happy for Alex that The Lifetimer is the graduation gift, something Alex is talking about since the beginning of the study.

The
Lifetimer 

You have followed the societal discourse around The Lifetimer closely. While you are supporting the technology you have been concerned about the increasing inequality and discrimination based on the technology. A fair democratic decision on the fate of the technology is needed now.

You have agreed to support the referendum as a poll worker, making sure that everyone votes anonymously and that the vote runs smoothly.
